

an attempt to build
Erin Gee's
Biosynth
v 3.0 2018

Her schematic is using a Teensy, I am using an Arduino Nano here.

[I don't see R4, R5, or R6 on the parts list.]

J5 pins are the arduino inputs:
J5-1 = GSR = A6
J5-2 = Thermistor = A0
J5-3 = Pulse = A1
